

Cannabis Dosage Guide & *Response Tracker*®

Physician-developed medical cannabis you can trust.

HEALERCANNABIS.COM

Maryland

Welcome,

I created this Dosage Guide[®] to eliminate confusion and ensure your success with Healer cannabis products.

Cannabis affects everyone differently. Achieving the best results is based on finding your optimal dosage and frequency with high quality and reliable products.

I trust and recommend Healer products to help you feel your best every day.

Dr. Dustin Sulak
Co-founder, Healer; Founder, Integr8 Health
Board Member, Society of Cannabis Clinicians

Healer Spectrum

Taste and feel the difference.

The Healer Spectrum is created by our patented nano-filtration process and sets a new standard for

- Removing impurities
- Delivering more of the plant's "entourage" of beneficial acidic & minor cannabinoids, terpenes, flavonoids and complex phytonutrients

Why all cannabinoids are essential

After 12 years of clinical experience treating patients with cannabis, Dr. Sulak is certain that results improve and people need to take less when using oral cannabis products that contain more of the plant's original compounds including THC, CBD, acidic cannabinoids (THCA, CBDA, CBGA), terpenes and phytonutrients.

THC has an incredible ability to address a wide range of symptoms and conditions by closely mimicking the activity of our inner pharmacy's endocannabinoids. These endocannabinoids are compounds produced in all our tissues to help us respond to illness and injury, decrease pain and inflammation, and transform limiting patterns of thought and behavior. The other cannabinoids work synergistically with THC and each other to create more therapeutic effects and lower the likelihood of side effects.

All of the Healer formulas can be used without causing impairment when dosed appropriately. For people who know they are very sensitive to THC, and for those without experience using THC, who wish to avoid impairment, Dr. Sulak recommends starting with the Relief, Balance, or THCA formulas.

Most people who are new to THC build tolerance to the impairing (and other) side effects over the first few days while the therapeutic effects improve. This is one of the reasons for starting at a low dose and increasing slowly, as described in this Guide.

Healer Formula Descriptions

Night

6:1 THC:THCA
IMPAIRING

- Dr. Sulak's #1 formula for sleep
- Relaxing, sedating and calming
- Combine with inhalation to help fall asleep
- Useful for daytime symptoms in people sensitive to the stimulating effects of cannabis

Uplift

4:1 THC:THCA
IMPAIRING

- Energizing THC daytime formula
- Stimulating and non-sedating effects
- Perfect for THC micro-dosing

Pain

1:1 THC:THCA
LOW IMPAIRING

- Dr. Sulak's #1 formula for pain
- Pain-relieving effect of THC + anti-inflammatory properties of THCA
- Useful for less impairing nighttime use (especially for nighttime bathroom trips)

Balance

1:1:1:1 THC:THCA:CBDA:CBDA
LOW IMPAIRING

- Dr. Sulak's best daily supplement for most symptoms
- Versatile for day and night use
- Non-impairing at low doses (less than 4-5 drops)
- Broadest array of cannabinoids, terpenes and minor beneficial compounds

Relief

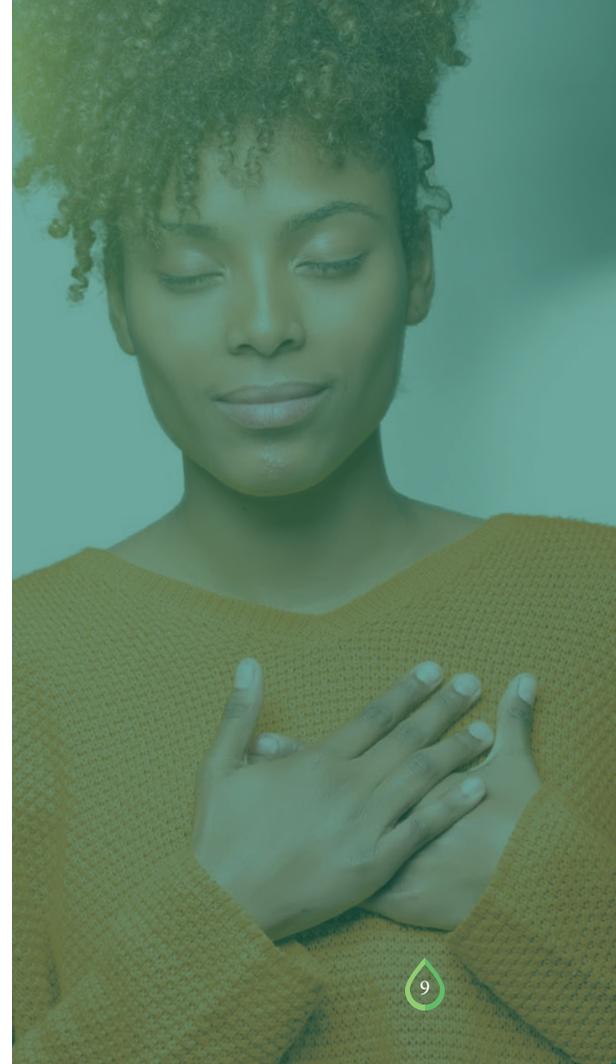

1:4 THC+THCA:CBDA+CBDA
NON IMPAIRING

- Dr. Sulak's recommendation for a non-impairing daytime formula
- Non-impairing at low and moderate doses (less than 5-6 drops)
- Stronger, more cost-effective compared to Hemp CBD

THCA

Unheated THC
NON IMPAIRING

- Supports weight loss, a healthy metabolism and blood sugar control
- Anti-inflammatory and neuroprotective
- Great for symptoms including pain, nausea and seizures
- Must keep refrigerated

MICRO-DOSE FORMULAS

1 Drop = 1 mg Total Cannabinoids

*Low and Non Impairing: most individuals do not experience any THC-related impairment when taking 1 mg or less of THC per dose (e.g. 5 drops of Relief, 4 drops of Balance, 2 Drops of Pain and 1 drop of Night or Day)

Daytime dosing guide

Step 1: Start with recommended dose:

2 DROPS FOR BALANCE, DAY, NIGHT

4 DROPS FOR PAIN

5 DROPS FOR RELIEF

Day 1 & 2:

- Take 1-3x per day as needed.
- Shake bottle well. Place drops under tongue. Hold for 1-5 minutes before swallowing.
- Check your Inner Inventory (page 14) before and 1 hour after each dose .
- Wait 1-2 hours before taking more.
- Track your results on the Response Tracker© on page 18.

Step 2: Find your optimal therapeutic dose.

If you do not feel results, it's critical to increase your dosage every 2 days by:

1 DROP FOR DAY, NIGHT

2 DROPS FOR BALANCE, PAIN

5 DROPS FOR RELIEF

- Continue to take 1-3x per day.
- Repeat increasing your dosage every 2 days until you feel symptom relief.
- If experiencing side effects or loss of benefit, lower the dosage by 1-2 drops.
- Optimal dosage is 4-20+ drops per use for most people.
- Track your results on the Response Tracker© on page 18.

Nighttime dosing guide

Step 1: Starting dosage for nights 1 & 2:

- Take 1 hour before bed.
- Shake bottle well.
- Start with 2 drops of Night or 4 drops of Pain formula.
- Place drops under the tongue. Hold 1-5 minutes before swallowing.
- Always wait 1 hour between doses. If you wake up in 3 to 5 hours, you may take additional drops. Start with half the dose you took before bed.
- You may combine with inhaled cannabis 15-30 minutes before bed, which can be helpful for falling asleep.
- Track your sleep quality and the amount of drops you're taking on the Response Tracker© on page 19.

Step 2: Find your optimal therapeutic dosage.

- Beginning on night 3, add 1 drop each night until you achieve deep, restorative sleep.
- If a dose increase leads to morning grogginess, remain at the same dose for 3 nights in a row. The grogginess will likely resolve, but the restorative sleep will continue. If so, you have found your optimal dose.
- If the morning grogginess does not resolve after 3 days, decrease your dose by 1 drop.
- Most people achieve great results taking 4-20+ drops.
- Track your sleep quality and the amount of drops you're taking on the Response Tracker© on page 19.

WARNING: Cannabis can increase the sedation and duration of some sleep medications. Excessive cannabis use in combination with sleep medications could result in disorientation, fall risk, morning grogginess and other side effects. Using cannabis in combination with antihistamine medications (i.e. Benadryl) may cause anxiety and dry mouth. Before taking cannabis with other sleep medications, please consult your medical provider.

How do I know if it's working?

Always Check Your Inner Inventory® to check in with your body and mind before and 1 hour after use.
If your score improves, then you know you're likely feeling the effects of the amount taken.

RATE EACH ON A SCALE OF 1 TO 10 (1=WORST AND 10=BEST):

Breath

How easy and smooth
is your breath?

Body

How easy is it to
remain still and
comfortable?

Mood

How easy is it for you
to smile right now?

Symptom(s)

Assess your wellness by
rating your symptom(s).

Track your response on page 18 to see improvement over time.

Usage tips for the best results

- Refrigerate for best results (to preserve acidic cannabinoids)
- Shake bottle well
- Taking drops sublingually (under your tongue) and holding them in your mouth for 1-5 minutes before swallowing increases direct absorption into the blood vessels
- Looking in a mirror can help you count the drops, or administer by first placing drops on a spoon or by using an oral syringe
- Drops will be even better absorbed—resulting in a stronger effect—when taken after a meal containing some healthy fat or oil
- Wait at least one hour before taking additional drops
- Adding drops to food or drink may delay the onset and require more drops
- Drops can also be applied directly on skin as a topical product

How to reverse cannabis tolerance and increase benefits

If you notice you require more cannabis and are getting less therapeutic benefits, then you are building tolerance to cannabis. You can quickly reverse cannabis tolerance, increase your sensitivity, save money and get better results with this Sensitization Protocol.

EXPERIENCED CANNABIS USERS

A two-day cannabis fast prior to using Healer formulas is recommended. During this time, your body will produce more cannabinoid receptors, ensuring excellent therapeutic results. If you cannot tolerate 2 days without cannabis, a 24-hour break can be helpful.

For more details and support to be successful with this program, see Healer.com/programs/sensitization-protocol

Sensitization Protocol

Days 1 & 2:

- Take a 48-hour cannabis fast (if challenging, modify to 24-36 hours).

Days 3, 4, 5:

- Restart the same Healer product at approximately 50% of the dose that worked well previously, 1-3 times daily.
- If you notice nothing at this starting dose, increase by 1-2 drops per dose until you experience mild (but not full-strength) beneficial effects.
- Remain at the dose that produced mild beneficial effects through the end of day 5. Some people experience stronger effects over the course of days 3-5 despite remaining at the same low dose.

Days 6+

- If additional symptom relief is needed after maintaining your mildly noticeable dose for 3 days, gradually increase by 1-2 drops per dose each day until you experience satisfactory health benefits or symptom control.
- If you experience unwanted side effects or tolerance-building then reduce your dosage by 1-2 drops per dose.

Healer Response Tracker: Sleep from Last Night

Date	Formula	Amount	# Hours Slept	# of Wake Ups	How Do You Feel? 1-10, 10 BEING BEST	AM Symptoms 1-10, 10 BEING SEVERE

INTERACTIONS

Cannabis may interact with certain medications, including the anticoagulant warfarin, the seizure medications valproic acid and clobazam, and other drugs metabolized by the liver enzymes CYP3A4, CYP2C9, and CYP2C19.
